

Problems with Outline and Timeline

The screenshots on these pages are from a completely new install.

The activity took place over the period of 45 minutes, which equates to the activity on a normal site.

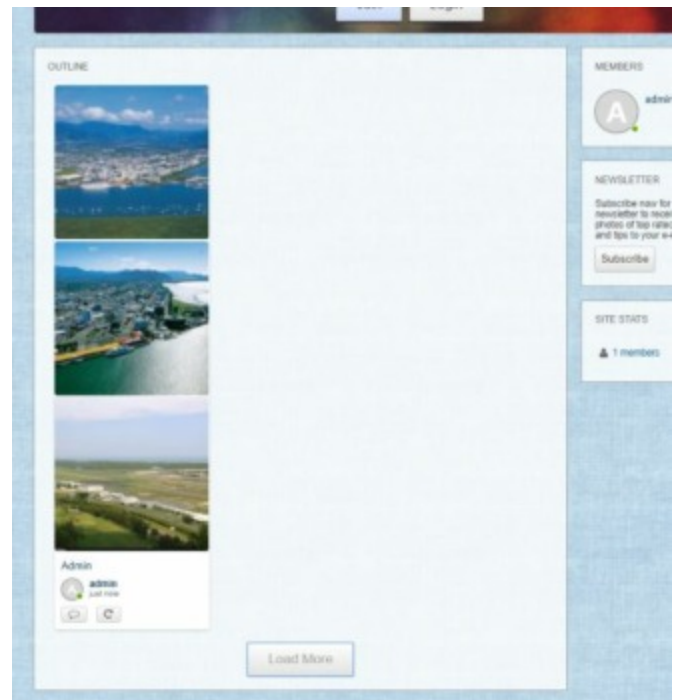

It involves two users (Admin and one member).

Each person uploaded a number of photos during that period.

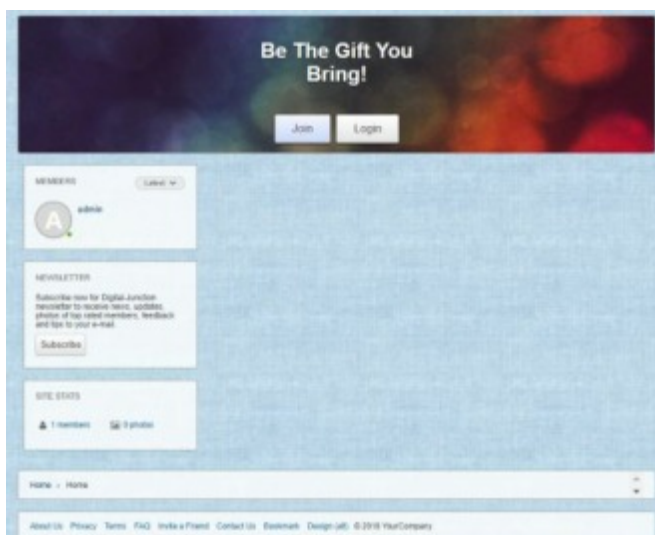

Problem

The Outline and Timeline are not accurately recording this activity.

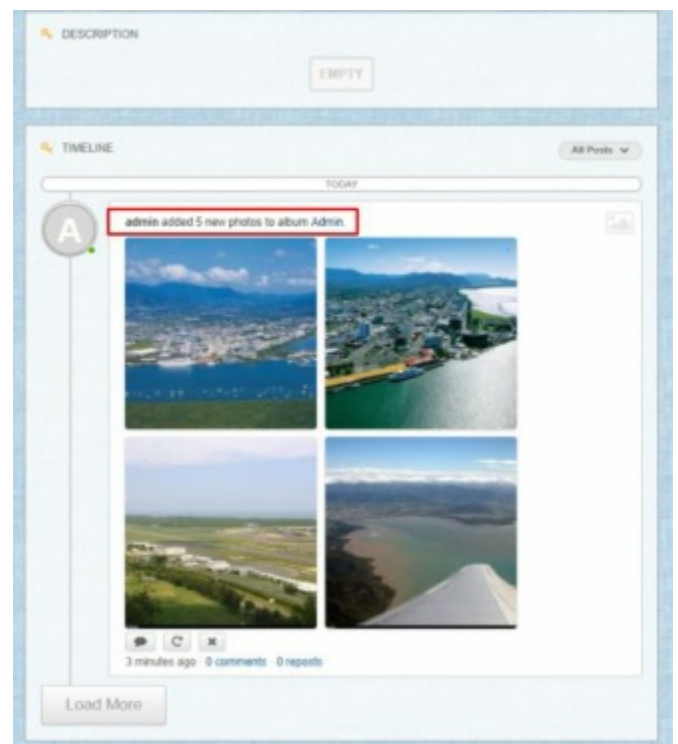

It's possible that both the Outline and Timeline are set to show only a certain number of photos. I'm unable to find this setting, but it should be all items, or an adjustable amount.

Only photos 1, 2 and 3 are shown in the Outline. Photos 4 and 5 aren't there even if the "Load More" button is clicked.

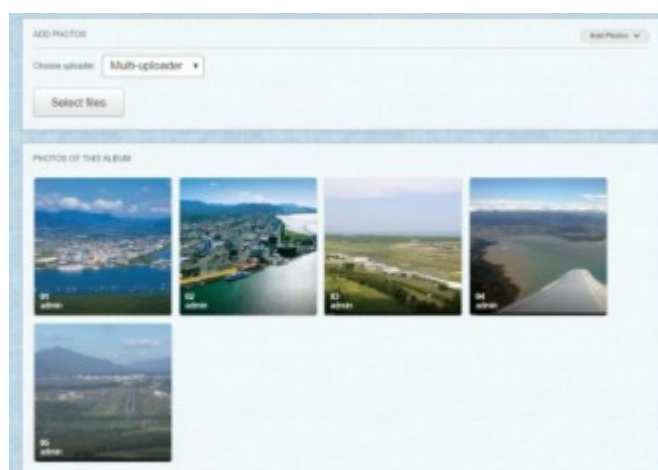

This screenshot shows that the timeline is empty after a new install.

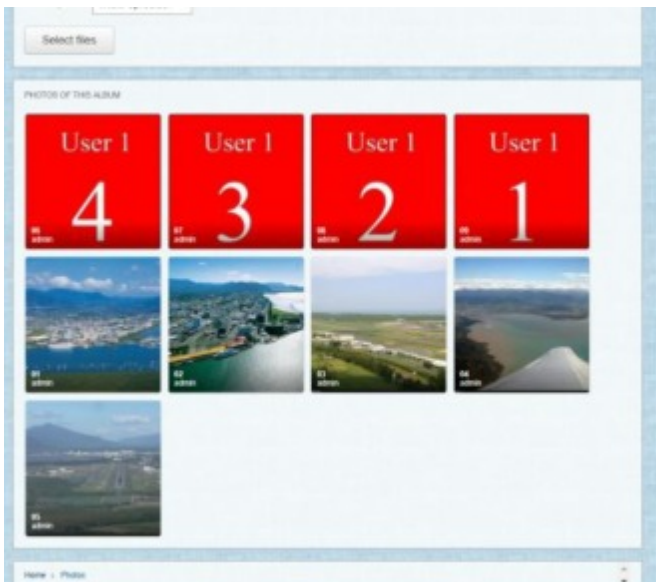

Four photos are shown in the timeline. Photo 5 is missing. Once again, clicking the "Load More" button has no affect.

There doesn't seem to be any settings in the Timeline or Photos Modules to change these figures.

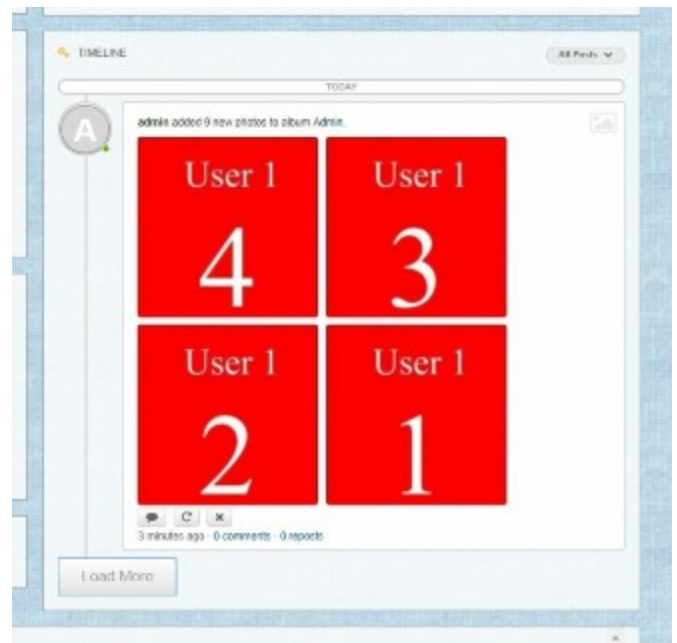

The end result is that neither the Outline or Timeline are accurate representations of a day's activities and maybe a better description would be "General Overview" if this is intended.

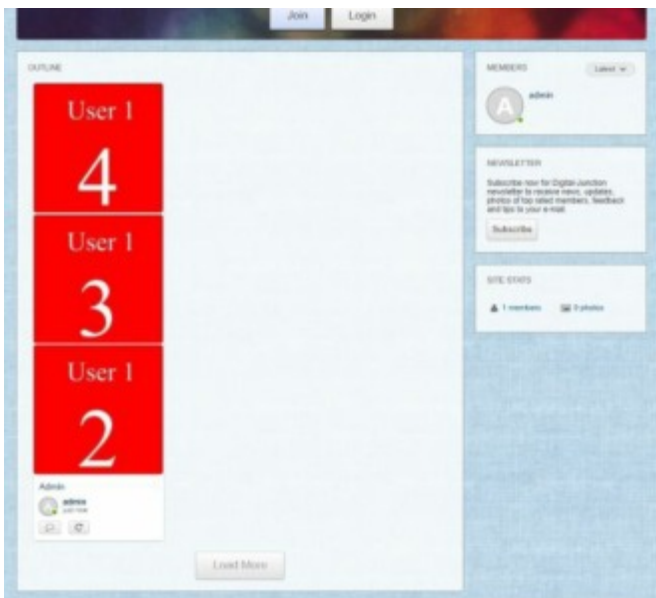

Admin posted 5 scenic photos. This is a screenshot of his album page.

A few moments after the previous screenshots were taken, Admin added four new photos. The above screenshot is from the Albums Folder.

The timeline does display all four images, but the previous batch by the same user are nowhere to be seen.

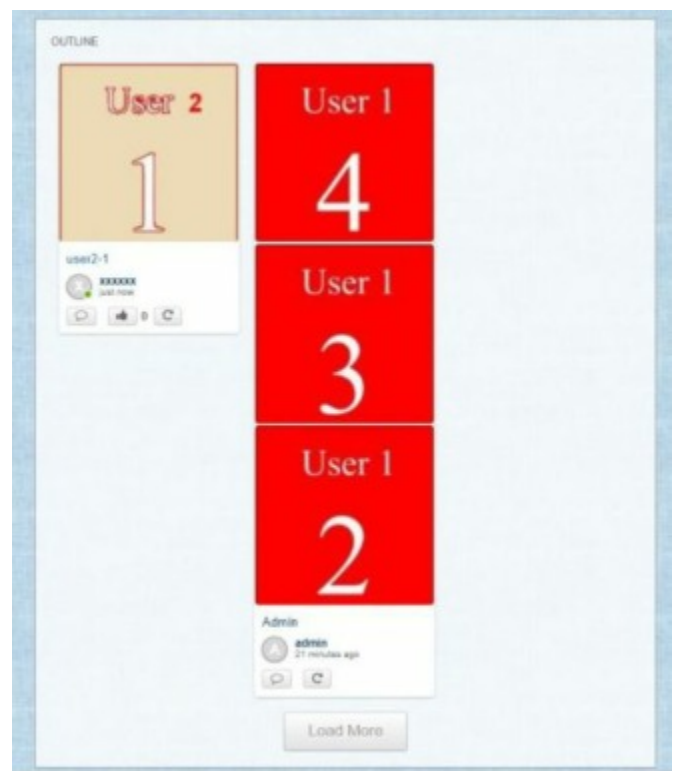

Once again, the Outline only shows three of the new photos, this time with the first photo (Image 1) missing. In the previous upload, Photo 5 was missing.

The previous batch of scenic photos have disappeared completely.

The “Load More” button has no affect.

Members are not seeing a representation of the day’s activities.

User 2 posted a single photo (brown). This appears correctly in the Outline, but the previous upload by user 1 is still incorrect.

User 2's Timeline also displays the single Photo correctly.

The "All Posts" Timeline on User 2's profile page shows all 4 photos he's posted so far, but all of User 1's images are missing.

The "Load More" button does nothing.

A few minutes later, User 2 posted 3 more photos. These appear in the Outline, but his first photo posted a few minutes earlier has disappeared.

The Outline is missing:

- All of User 1's scenic photos
- One of User 1's graphic images
- One of User 2's graphic images.

In a nutshell, six (6) images are displayed on the outline and seven (7) images are missing.

In other words, the Outline is displaying under 50% of the past hour's activities.

User 2 uploaded another 2 images (5, 6). These are displayed on the outline, but images 2 and 3 are shoved aside, as was image 1 previously.

It would seem that only 3 posts by the same user are displayed within a certain time frame.

What if we want more accuracy? How is that figure increased?

The Timeline continues to show the last four images uploaded by a single user. All previous images upload by that user are gone, as are all the images uploaded by User 1.

If any of this is planned, some explanation would be helpful.

If there are settings available to allow admin's to show all activity, or increase viewed items to (say) ten to avoid flooding, where are these settings?

Thank you
