

Bringing Approval Items to Top of Dashboard

In it's default state, Dolphin doesn't clearly show items needing approval. Admin's have to scroll down the dashboard screen to find them.

This simple hack brings the approval items (if any) to the top of the dashboard so that an administrator will instantly see them when he or she goes there.

Dashboard Before Changes:
Approval Items can't be Seen.

Dashboard After Changes:
Approval items can be clearly seen

It's now just a matter of clicking each item to go to the respective module and approve it.

Open /Inc/classes/BxDol/AdminDashboard.php and locate `$this->aBlocks = array(` somewhere around line 38).

Move `'stats' => true,` to just below `'help' => 'on'`
Save and clear the cache.

Before Changes:

```
37 }
38 $this->aBlocks = array(
39     'help' => 'on' == getParam('sys_show_admin_help') ? true : false,
40     'links' => true,
41     'charts' => true,
42     'stats' => true,
43 );
44 }
```

After Changes:

```
38 $this->aBlocks = array(
39     'help' => 'on' == getParam('sys_show_admin_help') ? true : false,
40     'stats' => true,
41     'links' => true,
42     'charts' => true,
43 );
44 }
```

Note: This is a CORE hack and your changes may be lost during the next Dolphin update. Save this file in case you need to make changes again.
